In addition, the generic integer type should always be the fastest numerical type on any platform because it is just the size of a word on the current processor.. Obviously, most of the code you type does not depend on the number of bits in a variable, but if your code depends on it, choose carefully.. Modern operating systems and state-of-the-art processors now have built-in routines that are superior to the one-shot code that supports 48-bit true type.
